WHAT WORKS FOR HEALTH

Evidence matters when identifying solutions to problems that affect our communities. Strategies that are tested for effectiveness and shown to work can stretch the impact of scarce dollars. But how do you know which strategies are effective?

What Works for Health (WWFH) **is an easy-to-use, online tool to help you find policies, programs, and systems changes that make communities healthier places to live, learn, work, and play.**
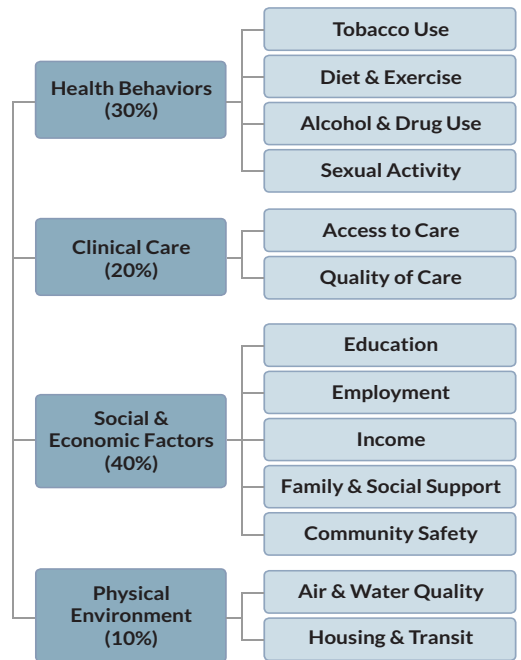

WWFH is a great place to find ideas to address your community's priorities. **WWFH** includes over 400 policies and programs, each with a literature summary and implementation resources, and is regularly updated by our team of evidence analysts.

For each strategy, you will find:

- Ratings of intervention effectiveness
- Expected beneficial outcomes
- Key points from relevant literature
- Implementation examples and resources to move toward action
- An indication of likely impact on disparities and health equity

You can search **WWFH** by keyword (e.g., mental health, nutrition), or browse by topic (e.g., Education, Community Safety), decision maker (e.g., Government, Business), or evidence rating. You can easily save strategies, print summaries, and share what you find.

With the combined power of the County Health Rankings & Roadmaps and What Works for Health, you have a snapshot of your county's current health AND information on strategies that can make your community healthier.

Health Behaviors (30%)	Tobacco Use
	Diet & Exercise
	Alcohol & Drug Use
	Sexual Activity
Clinical Care (20%)	Access to Care
	Quality of Care
